

NRESi

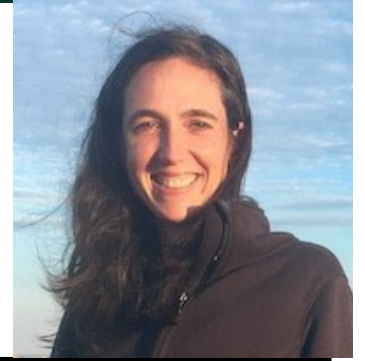

"Our environment is our future"

# NRESi COLLOQUIUM

**Loren McClenachan, PhD**

**CRC in Ocean History and Sustainability  
School of Environmental Studies and History  
University of Victoria**

**Historical marine ecology and conservation:**

**Understanding baselines and restoring relationships**

Historical ecology provides a window into ecosystems past, which can provide key insights for natural resource conservation and management. In marine systems, historical ecology research has been especially valuable in reconstructing ecological baselines and providing evidence for cultural connections to ecosystems before intensive and destructive human impact. Drawing on a range of examples from BC and beyond, this talk will describe the approaches of historical marine ecology and the use of historical insights for conservation. In particular it will highlight the application of historical ecology to endangered species recovery, fisheries management, climate resilience, and Indigenous resource management.

**Thursday,  
Mar 27, 2025  
7:30 PM**

**Room 8-166  
and Online**
